(a)
what the steering optimises
shows no clear link to the gate
0.365 → 85.87
246 aa
collapse threshold (pLDDT 60)
0.339 → 28.85
123 aa
r = +0.2125, t(40) = +1.375, n.s. (n = 42)
marker area ∝ generated length
ESMFold mean pLDDT
distinct 3-mer fraction (less repetitive →)
(b)
and the gate tracks measured
stability only weakly
"is it a design"
+0.313
sequence length
+0.306
pTM
+0.246
mean pLDDT
+0.205
n = 1,859 external designed sequences
Spearman ρ with measured stability
